                                                                                                                              The invention comprises a method for assessing whether a patient is afflicted with breast cancer or ovarian cancer. The method involves the use of specific DNA markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. DNA sequences ABT31894 - ABT31949 encode human breast/ovarian cancer-related proteins
                                                                                                                                                                                                                                                                                                                    9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    a variety of markers.
                                                                                                                                                                                                                                                                                                 1 GGGCCCTTGTCCTGGGCCATGGCCCAGGGGGTCCTGGGGCCTGGGCAGCTGGGGGCT

The present invention describes a method for assessing whether a patient is afflicted with ovarian cancer by comparing: (1) the expression of a marker (1) (see AAF98594 to AAF98730), in a patient sample, and (2) the mornal level of expression of (1) in a control non-ovarian cancer sample, where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. It have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (1) assessing and treating ovarian cancer; (2) making isolated hybridoma, which produces an antibody useful for ovarian cancer
where a significant difference between the level of expression in (a) and (b) is an indication that the patient is afflicted with ovarian cancer. (I) have cytostatic activities and can be used in antisense gene therapy. The method, compositions and kits from the present invention can be used for: (I) assessing and treating ovarian cancer; (2) making isolated hybridoma, which produces an antibody useful for ovarian cancer assessment; and (3) inhibiting ovarian cancer in a patient. AAF98573 to AAF98593 represent human kinase marker primers and probes which are used in the exemplification of the present invention

with a modified polylinker; Plasmid DNA from the
normalized library NCI CGAP_PR22 was prepared, and 8s
circles wase made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
c 5,000 clones made from the same library (cloneIDs
985608-986756, 1101192-11011959, and 1217928-1220615).

Patent No. 6657056

GENUERL INFORMATION

APPLICANT: W. Jiangchun

APPLICANT: Dillon, Davin C.

TITLE OF INVENTION: COMPOUNS FOR IMMUNOTHERAPY OF PROSTATE CANCER AND

TITLE OF INVENTION: METHODS FOR THEIR USE

PILE REPERENCE: 210121.427C4

CURRENT FILING DATE: 1998-07-14

NUMBER OF SEQ ID NOS: 228

CURRENT FILING DATE: 1980-07-14

NUMBER OF SEQ ID NOS: 228

SOFTWARE: FastSEQ for Windows Version 3.0

SEQ ID NO 120

LENGTH: 90
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

Novel polypeptides and nucleic acids homologous to transmembrane receptor, thymosin, neuromodulin-like family of proteins for diagnosing, treating cancer, atherosclerosis, neurological, skin and autoimmune

Claim 1c; Page 143; 323pp; English

The invention relates to 24 novel human proteins designated NOV1-NOV14

(ABB09501-ABB09524), collectively referred to as NOVX proteins, and
nucleic acids encoding them (AB093879-AB093902). NOVX proteins, and
nucleotides are useful in the treatment, diagnosis or prevention of NOVXnucleotides are useful in the manufacture of a medicament for treating
ssociated disorders or in the manufacture of a medicament for treating
such disorders, with specific applications described for each of the 24
NOVX proteins, based on their homology to known proteins. Various
disorders are associated with NOVX proteins including neurological
disorders (e.g., Alzheimer's, Huntington's and Parkinson's diseases),
pain, behavioural disorders, addiction, tuberous sclerosis, cancers
ce gain, colorectal cancer, leukaemia and osteosarcoma), immune diseases
ce (e.g., allergies and autoimmune diseases), myasthenia gravis, asthma,
ce yailous forms of arthritis, diabetes, thyroiditis, cardiovascular disease
ce (e.g., hypertension), reproductive disorders, enders, pancreatitis,
corrience, psoriasis, scleroderma, alopecia, ulcers, pancreatitis,
circhosis, glomerular endotheliosis, polycystic kidney disease, endocorriection communes of arthritish alprocessing-related disorders and disorders
circhosis, glomerular endotheliosis, polycystic kidney disease, endocorriection cathery regulation. NoVX nucleic acids and polypeptides may
competication of small molecules that modulate or inhibit processes such
characterogenesis, cell differentiation, cell montality, cellular
continence of priners or probes for forenesic byte and
compising NOVX nucleic acids are useful for producing non-human
continentifying and cloning NOVX homologues in other cell types. Cells
comprising NOVX nucleic acids are useful for studying the function and
comprising not contain and for incomplement and province and contained and cloning the desire the desired and contained and for incomplement and contained and for incomplement and contained and contained and contained and containe activity of NOVX proteins and for identifying and evaluating modulators of NOVX activity. The present sequence represents the prostatin precursor like protein NOV14b

The invention relates to an isolated Protein Modification and Maintenance (PMM) polypeptide. Polypeptides of the invention may be used in the diagnosis, treatment and prevention of disorders associated with decreased expression or activity of PMM. These include gastrointestinal disorders (e.g. Crohm's disease), cardiovascular disorders (e.g. unaemia), cell proliferative disorders, developmental disorders, epithelial disorders (e.g. scabies), neurological disorders (e.g. Alzheimer's disease) reproductive disorders (e.g. ectopic pregnancy), and in gene therapy or a vaccine for such diseases. They may also be used in the assessment of the effects of exogenous compound on the expression of nucleic acid and amino acid sequences of protein modification and maintenance molecules. The found to have homology with rat prostasin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               157

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful for clarifying the function of the protein encoded by the cDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers anable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      for synthesizing full length cDNA clones and their use
                                                                                                                                                                                                                                                                                                                                                                                                               Kawai Y;

RESULT
```

The present invention relates to the isolation of novel human proteases, and the mucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. inflammatory diseases and asthma), cardiovascular diseases (e.g. restenosis and coronary thrombosis), brain or neuronal-associated diseases, metabolic disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. diabetes, obesity), inflammatory disorders (e.g. disorders, pain, sexual dysfunction, mood disorders, attention disorders, oppilition disorders, hypotension, pypertension, psychotic disorders, neurological disorders (e.g. Albeimer's disease, Parkinson's disease) and dyskinesias. The nucleic acids and polypeptides are also useful for treating viral infections caused by human immunodeficiency virus (HIV), and non-viral infections such as ocular disease (e.g. thuman proteases of the invention

Sequence 818 AA;

Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and inflammatory

This invention comprises the CDNA and protein sequences of an isolated prostasin-like serine protease and reagents and methods for regulating the human prostasin-like enzyme activity. Prostasin is a trypsin-like serine protease is useful fluid. An antibody specific for prostasin-like serine protease is useful for immunodetection and diagnosis of micro-metastases, autoimmune lesions and renal failure in biopsy specimens, plasma samples and body fluids. The antibody may be used to modulate enzyme activity in a disease, such as metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), atherosclerosis, neurodegenerative disease (G.S. prion protein amyloid plaques of Genstmann-Straussler Syndrome, coreutzfeldt-Takob disease, Scrapie) or infection, particularly viral infection. The human prostasin-like serine protease gene provides a therapeutic target of decreasing human prostasin-like serine protease cortivity, in particular for treating or preventing metastatic cancer. The agonists and antagonists of the nucleotide sequence may be useful to treat augment and inhibit the enzyme activity which may be useful to treat core record augment and inhibit the enzyme activity which may be useful to treat core record augment and inhibit the enzyme activity witch may be useful to treat core record augment and inhibit the human protease of human prostasin-like arriver and any prostasin-like serving arriver and any prostasin-like serving arriver and particularly debtal implants. Altered levels of human prostasin-like arriver and any contagned and the arriver, which the may be useful to treat contagned and inhibit the contagned and the protease and degradation of human prostasin-like arriver.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel human prostasin-like serine protease polypeptide and polymucleotide which can be regulated for treating metastasis of malignant cells, inflammation, atherosclerosis, neurodegenerative disease and infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              136 IGADIALIRLASPASIGPAVWPVCLPRASHRFVHGTACWATGWGDVQEADPLPLPWVLQE 195

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          atherosclerosis. The nucleic acid sequence is also useful in diagnostic assays for detecting diseases and abnormalities or susceptibility to diseases related to the presence of mutations in nucleic acid sequences which encode the enzyme. The present sequence represents the human prostasin-like serine protease sequence of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             serine protease activity inhibits both smooth muscle cell proliferation and lipid accumulation and inhibit the progression of restenosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 196 VELRILGEATCOCLYSQPGPFNLTLQILPGMLCAGYPEGRRDTCQGDSGGPLVCEEGG 253

```
The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PRS) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in polypeptide and polymucleotide sequences have applications in casponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynuclectide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 20; SEQ ID NO 35212; 103pp; English.

WPI; 2002-723277/78. N-PSDB; ABS76501. Assessing whether a patient is afflicted with ovarian cancer, useful in assessing the stage or progression of the disease, comprises comparing the expression level of a cancer marker in a sample from a patient and from a non cancer patient.

Disclosure; Page 385; 481pp; English.

The present inversion relates to a new method involves comparing the expression level of a marker in a patient sample and the normal level of expression level of a marker in a control non-varian cancer sample, where the expression of the marker in a control non-varian cancer sample, where the marker is selected from 363 cancer markers described in the characterising cancer, in detecting the presence of cancer as early as possible, and the recurrence of ovarian cancer. The method may also be of particular use with patients having an enhanced risk of developing cancer). The cancer markers may be used in the management and treatment cancer. The cancer as disease, or parkinson's disease, brain cancer. The cancer are disease, and the recurrence of ovarian cancer. The cancer markers may be used in the management and treatment cancer. The cancer markers may be used in the management and treatment of e.g. brain and central nervous system disorders (e.g. bacterial and viral meningities of e.g. bacterial or viral meningities or encephalitis), inflammations (e.g. bacterial or viral meningities or encephalitis), connective tissue disorders, or heart disorders (e.g. ischaemic heart disease or atherosclerosis). The compositions and methods may also be used in assessing the histological type of neoplasm associated with the whether ovarian cancer, monitoring the progression of ovarian cancer, determining whether ovarian cancer has metastasized or is labely to metastasize. selecting a composition for inhibiting ovarian cancer, assessing the ovarian carcinogenic potential of a compound, or inhibiting ovarian cancer or at risk of developing ovarian cancer. The present amino acid sequence represents one of the ovarian cancer markers described in the The present invention relates to a new method for assessing whether a

The method comprises measuring the concentration of prostant as protein or mRNA, in a sample and comparing the result with one or more controls, where a level of prostatin expression that is significantly higher than in controls is indicative of cancer, or increased susceptibility. The assay is specifically used to detect ovarian cancer or a predisposition to it, but

may also be applicable to breast, prostatic, lung and colonic cancers. Using the method of the invention it was shown that in ovarian cancer, the highest levels of prostatin were found in stage II disease, suggesting that this marker is suitable for early detection. The presents expresents the human prostasin protein used in the method of invention as a marker for early detection of cancer or susceptability

The invention comprises a method for assessing whether a patient is afflicted with breast cancer or ovarian cancer. The method involves the use of specific DAM markers. The method of the invention is useful in the detection and treatment of ovarian and breast cancer. Amino acid sequences ABJ37025 - ABJ37080 represent human breast/ovarian cancer-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   à
                                                                      The invention relates to human prostasin-like enzyme polypeptides and methodology. The enzyme can be expressed by standard recombinant methodology. The polypeptide, polymucleotide and medulators are useful for treating diseases like metastasis of malignant cells, tumour angiogenesis, inflammation, chronic obstructive pulmonary disease (COPD), partheroselerosis, neurodegenerative disease and pathogenic infection, partheroselerosis, neurodegenerative disease and pathogenic infection, particularly viral infection. The prostasin-like enzyme gene provides a therapeutic target of decreasing the enzyme activity, in particular for treating or preventing metastatic cancer. Neurodegenerative diseases include for e.g. prion protein amyloid plaques of Genstmann-Straussler Syndrome, Creutzfeldt-Jakob disease and Scrapie. The agonists and anatagonists of the polypeptide may be useful to treat osteoporosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           235

or human polynucleotides or composition to more inversions a composition of the nucleic acid sequence. Also derivative or allelic variation of the nucleic acid sequence. Also claimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nagent that is differentially regulated in an animal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polynucleotides or method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polynucleotide or the compound that medulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chul) in an animal segmental nerve injury (Chul) in an animal segmental nerve injury (Shul) in an animal companied the sequence data for this patent did not form part of the printed the specification, but was obtained in electronic form directly from WIPO at the value of pain problemes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  10;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           111 DAKVSTLKDIIPHPSYLQEGSQGDIALLQLSRPITFSRYIRPICLPAANASPPNGLHCTV 170

The inversion in the control of the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also claimed are a vector comprising the nucleic acid sequence. Also comprising the vector identifying a nucleotide, a host cell comprising the vector to identifying a nucleotide sequence witch is differentially regulated in a naimal subjected to pain and a kit to perform the method, an array, a method for identifying an agent that is differentially expressed in neuronal tissue of a first animal subjected to pain, a method for identifying a compound which regulates the expression of a polynucleotide sequence which is differentially compound that regulates the activity of one or more of the composition, a compound that regulates the activity of one or more of the composition, a method for identifying a compound or small molecule that regulates the activity in an animal of one or more of the polypeptides given in the specification, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more polypeptides or their antibodies. The polypeptides or the compound that modulates its activity is useful for preparing a medicament for treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (Chung), chronic pain. The sequence presented is a human protein (shown in Table 2 of the readers or their any differentially expressed during pain. Note:

proteins and coding sequences are useful for treating or preventing NOV-associated disorders or in the manufacture of a medicament for treating the disorders, such as cancer, heart disease, inflammation, autoimmune disorders, allergies, blood disorders, Alba heart disease, inflammation, autoimmune IgA nephropathy, cirrhosis, arthritis, Alzheimer's disease, infections (e.g. bacterial, viral, parasitic), stroke, muscular dystrophy, epilepsy, and other wasting disorders associated with chronic diseases. NoV14a is a prostasin-like protein, and the NOV14a coding sequence localises to chromosome 16pl1.2

XX (DELT-) DELTAGEN INC.

XX Delta a pharmaceutical composition for treating epilepsy.

XX Props, ABS56430.

XX Propering a pharmaceutical composition for treating epilepsy.

XX The invention discloses a new transgenic mouse comprising a disruption in cranding there is no native expression of endogenous CAP1 gene. Transgenic compactibility to entire protease I (CAP1) gene. CAP1 is a serine protease and there is no native expression of endogenous CAP1 gene entibit an increased compactibility to enforce disruption in the CAP1 gene exhibit an increased succeptibility to selzures which are similar to epilepsy. Disclosed is a method for producing the transgenic mouse with a disruption in the CAP1 gene enchoded sequence homologous to at least a first or second polymolectide sequence homologous to at least a first or second polymolectide sequence homologous to at least a first or second correspendence of a ffecting a general protease. The transgenic compaction in a CAP1 gene method for producing the transgenic mouse with a mutation in a CAP1 gene (GAP1 a CAP1 agonist) as determining whether an agent modulates a CAP1 serine protease. The transgenic mouse, comprising a disruption in the CAP1 gene (GAP1 protein associated with a mutation in crashing contracting epilepsy. The sequence presenting a pharmaceutical composition for tracting epilepsy. The sequence presented is the mouse CAP1 protein and SCAP1 protein for protein and condition associated with a mutation for tracting epilepsy. The sequence presented is the mouse CAP1 protein for propagating a pharmaceutical composition for tracting epilepsy. The sequence presented is the mouse condition associated with a mutation in a CAP1 protein associated and a selectable manual and protease. The p

It also participates in lial migration and/or cell loss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             membrane-bound arginine-specific serine proteinase precursor - rat

Nyllernate names: mast cell tryptase
Nyllernate names: mast cell tryptase
C;Species: Rattus norvegicus (Norway rat)
C;Date: 27-Aug-1995 #sequence_revision 27-Oct-1995 #text_change 20-Jun-2000
C;Accession: JC4171
R;Ide, H.; Itch, H.; Tomita, M.; Murakumo, Y.; Kobayashi, T.; Maruyama, H.;
J. Biochem: 118, 210-215, 1395
A;Title: cDNA sequencing and expression of rat mast cell tryptase.
A;Accession: JC4171
A;Molecule type: mRNA
A;Residues: 1-274 <IDE>
